

# Replication of OHDSI study: Phenotyping

Seng Chan You

Department of Biomedical Systems Informatics, Yonsei University  
College of Medicine

[seng.chan.you@ohdsi.org](mailto:seng.chan.you@ohdsi.org)

# CDM Version 6 Key Domains

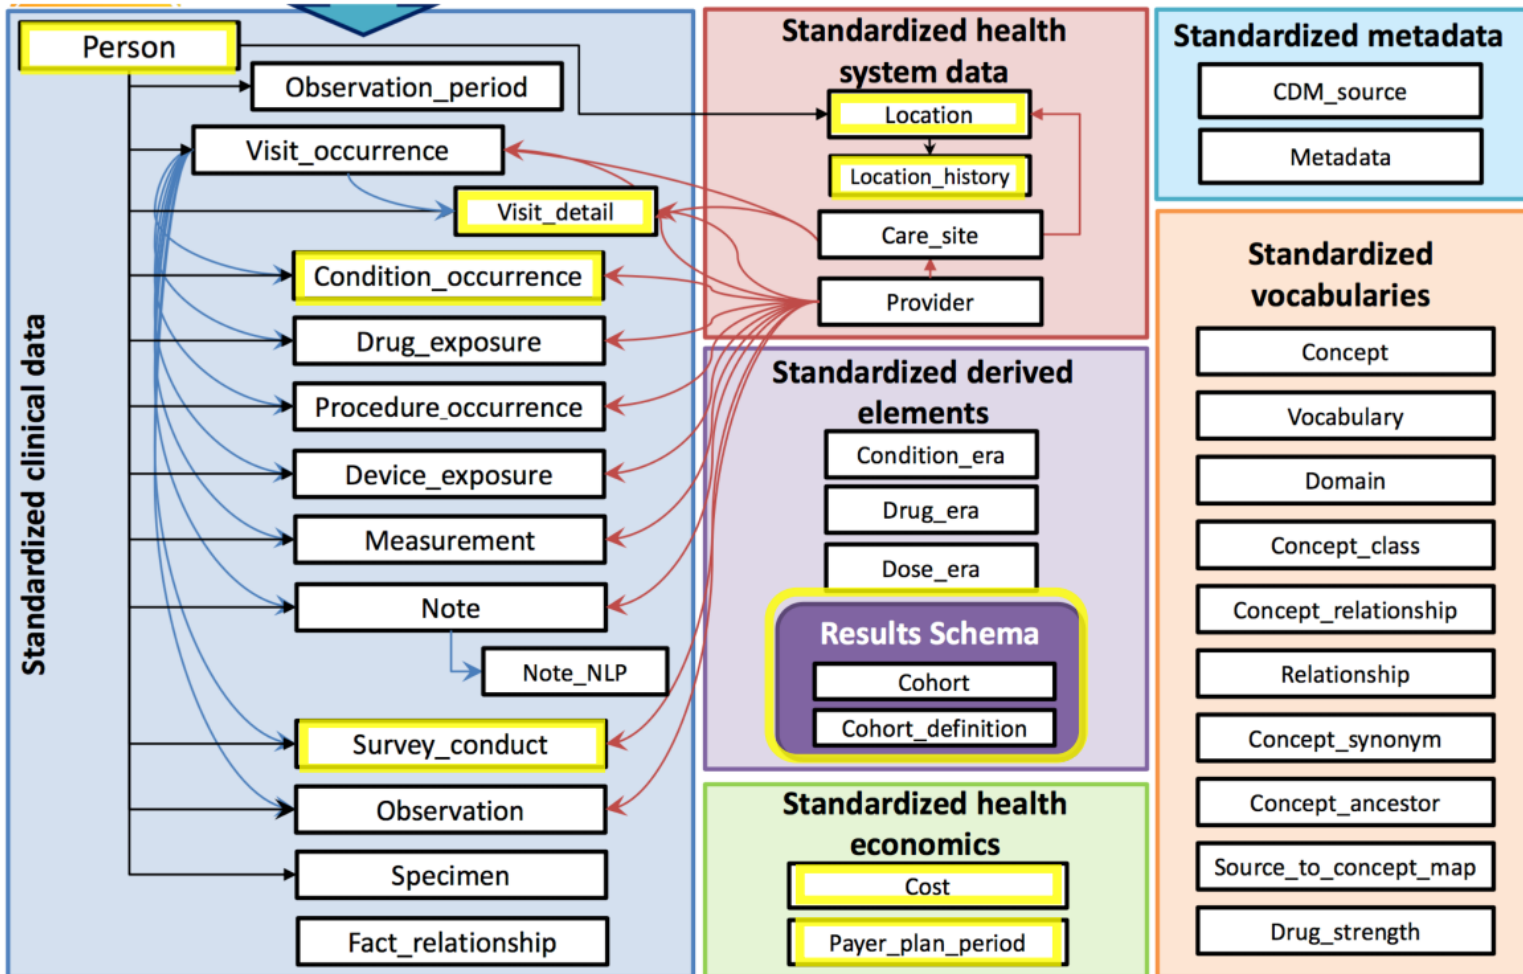

# OMOP CDM Principles

- Patient centric
- Vocabulary and Data Model are blended
- Domain-oriented concepts
- Accommodates data from various sources
- Preserves data provenance
- Extendable & Evolving
- Database Platform Independent

# OMOP Version 6 Key Domains

Explore the OMOP Vocabulary

<http://athena.ohdsi.org/>

# The common building block of all observational analysis: cohorts

Required inputs:

Target cohort:  
Person  
cohort start date  
cohort end date

Comparator cohort:  
Person  
cohort start date  
cohort end date

Outcome cohort:  
Person  
cohort start date  
cohort end date

Desired outputs:

Clinical characterization  
Baseline summary of exposures  
(treatment utilization)

Clinical characterization  
Baseline summary of outcome  
(disease natural history)

Incidence summary  
Proportion/rate of outcome  
occurring during time-at-risk for exposure

Population-level effect estimation  
Relative risk (HR, OR, IRR) of outcome  
occurring during time-at-risk for exposure

Patient-level prediction  
Probability of outcome occurring during  
time-at-risk for each patient in population

# OHDSI's definition of 'cohort'

Cohort = a set of persons who satisfy one or more inclusion criteria for a duration of time

Objective consequences based on this cohort definition:

- One person may belong to multiple cohorts
- One person may belong to the same cohort at multiple different time periods
- One person may not belong to the same cohort multiple times during the same period of time
- One cohort may have zero or more members
- A codeset is NOT a cohort...
  - ...logic for how to use the codeset in a criteria is required

## Exercise: Define target and outcome cohort for Lactic acidosis in metformin users

- What **initial event**(?) define cohort entry?
- What **inclusion criteria** are applied to the initial events?
- What defines a person's **cohort exit**?
  
- OHDSI Cohort must have:  
**Start Date & End Date**

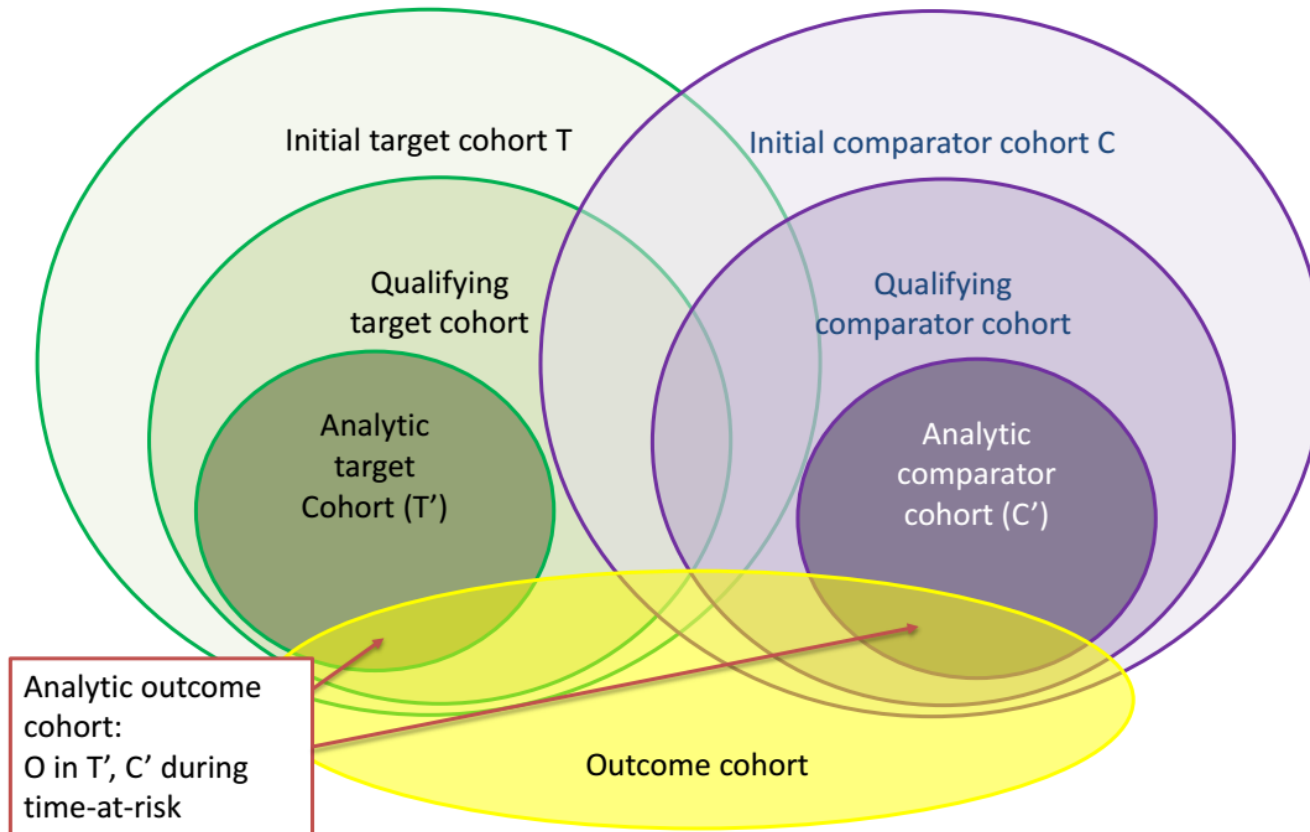

# Demo: Defining cohort using ATLAS

- Follow along at:

<http://ohdsi.org/web/ATLAS>

# Define cohort: A database is full of cohorts, some of which may represent valid comparisons

# Define cohort: Process flow for formally defining a cohort in ATLAS

- **Cohort entry criteria**

- **Initial events**

- Events are recorded time-stamped observations for the persons, such as drug exposures, conditions, procedures, measurements and visits
    - All events have a start date and end date, though some events may have a start date and end date with the same value (such as procedures or measurements).

} Initial cohort

- **Initial event inclusion criteria**

- **Additional qualifying inclusion criteria**

- The qualifying cohort will be defined as all persons who have an initial event, satisfy the initial event inclusion criteria, and fulfill all additional qualifying inclusion criteria
    - Each qualifying inclusion criteria will be evaluated to determine the impact of the criteria on the attrition of persons from the initial cohort

} Qualifying cohort

- **Cohort exit criteria**

# Association of Ticagrelor vs Clopidogrel With Net Adverse Clinical Events in Patients With Acute Coronary Syndrome Undergoing Percutaneous Coronary Intervention

Seng Chan You, MD, MS; Yeunsook Rho, PhD; Behnood Bikdeli, MD, MS; Jiwoo Kim, MS; Anastasios Siapos, MSc; James Weaver, MSc; Ajit Londhe, MPH; Jaehyeong Cho, BS; Jimyung Park, BS; Martijn Schuemie, PhD; Marc A. Suchard, MD, PhD; David Madigan, PhD; George Hripcsak, MD, MS; Aakriti Gupta, MD, MS; Christian G. Reich, MD; Patrick B. Ryan, PhD; Rae Woong Park, MD, PhD; Harlan M. Krumholz, MD, SM

**IMPORTANCE** Current guidelines recommend ticagrelor as the preferred P2Y<sub>12</sub> platelet inhibitor for patients with acute coronary syndrome (ACS), primarily based on a single large randomized clinical trial. The benefits and risks associated with ticagrelor vs clopidogrel in routine practice merits attention.

**OBJECTIVE** To determine the association of ticagrelor vs clopidogrel with ischemic and hemorrhagic events in patients undergoing percutaneous coronary intervention (PCI) for ACS in clinical practice.

## ATLAS

ATLAS는 OMOP CDM 기반의 표준화된 분석 기능을 제공하고 있는 OHDSI의 오픈 소프트웨어입니다. 에비드넷은 각 기관 서버에 ATLAS를 설치하여 원활한 CDM 연구가 진행될 수 있도록 돕고 있습니다. 기관연구자 혹은 협력연구자로 승인 받은 연구자는 해당 기관의 ATLAS에 접근하여 연구 설계를 할 수 있습니다. RFZ 참여 기관 간에는 연구자 등록 과정 없이 서로의 기관 ATLAS에 접속하셔서 자유로운 연구 설계를 진행할 수 있습니다.

ATLAS 사용법에 대한 자세한 안내는 튜토리얼을 참고하세요

### Cohort Entry Events

Events having any of the following criteria:

+ Add Initial Event

a procedure occurrence of **PCI**

+ Add attribute...

for the first time in the person's history

with age **Greater or Equal To** **20**

Delete Criteria

with continuous observation of at least **365** days before and **0** days after event index date

Limit initial events to: **earliest event** per person.

Restrict initial events to:  
having **all** of the following criteria:

+ Add criteria to group...

with **at least** **1** **using all** occurrences of:

a condition occurrence of **ACS**

+ Add attribute...

where **event starts** between **7** days **Before** and **0** days **After** **index start date** [add additional constraint](#)

restrict to the same visit occurrence

allow events from outside observation period

Delete Criteria

and with **at least** **1** **using all** occurrences of:

a drug exposure of **ticagrelor**

+ Add attribute...

where **event starts** between **7** days **Before** and **0** days **After** **index start date** [add additional constraint](#)

restrict to the same visit occurrence

allow events from outside observation period

Delete Criteria

Limit initial events to: **earliest event** per person.

Remove initial event restriction

## Cohort Exit

### Event Persistence:

Event will persist until:  ▼

### Continuous Exposure Persistence:

Specify a concept set that contains one or more drugs. A drug era will be defined by the concept set, using the specified persistence window as a maximum duration, and adding a specified surveillance window to the final exposure event. If the end date is inferred to be event start date + days supply in cases when day supply is not present, persistence assures that the cohort end date will be no greater than the end date of the final exposure event.

Concept set containing the drug(s) of interest:  ▼

- Persistence window: allow for a maximum of  ▼ days between events
- Surveillance window: add  ▼ days to the end of the era of persistence to determine cohort exit.

# #4 Create Outcome Cohort:AMI

## Cohort Exit

### Event Persistence:

Event will persist until:

### Fixed Duration Persistence:

The event end date is derived from adding a number of days to the event start date. For all cohort episodes will have the same fixed duration (subject to further filtering). The cohort may have varying cohort duration times due to the varying length of stay). This event persistence assures that the cohort end date is consistent across all cohort episodes.

- Event date to offset from:
- Number of days offset:  days

### Censoring Events:

Exit Cohort based on the following criteria:

No censoring events selected.

# #5 Create Outcome Cohort: GI bleeding

## Cohort Entry Events

Events having any of the following criteria:

a condition occurrence of **GI bleeding** ▼

**✗** for the first time in the person's history

with continuous observation of at least  ▼ days before and  ▼ days after event index date

Limit initial events to:  ▼ per person.

Restrict initial events
